## SUMMARY

I am a Frontend Engineer with 3+ years of experience. I build accessible, responsive, and high-performance web applications for diverse industries.

I'm especially interested in building practical digital solutions that solve real problems. I thrive best when turning complex requirements into simple, user-friendly interfaces that drive results.

I have production experience with JavaScript, TypeScript, React, Angular, Next.js, PHP, MongoDB, MySQL, Tailwind CSS, and REST API integrations.

---

## TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Next.js, Angular, PHP, HTML, CSS.

Databases & Backend: MongoDB, MySQL, Node.js

Tools: Git, Redux, Tailwind CSS, REST APIs.

## WORK EXPERIENCE

### Frontend Engineer, ShipPack

May 2025 - January 2026

- Created a central dashboard for Entity and Company users, making admin tasks approximately 30% faster for corporate clients.
- Architected the secure consumption of 30+ REST API endpoints, managing diverse data streams including Authentication, Wallet Systems, and Transaction History.
- Rebuilt old code using a clean Next.js setup, allowing the platform to handle 10,000+ users at the same time without slowing down.

### Frontend Engineer Intern, Remita Payment Services Ltd (RPSL)

April 2025 - Oct 2025

- Co-engineered the Sync Profile feature, a critical background service ensuring real-time data consistency across distributed server environments.
- I took ownership of the Admin QA Dashboard, identifying and resolving 20+ critical logic conflicts in Action Mapping, resulting in a 95% reduction in reported bugs during User Acceptance Testing (UAT).
- I partnered with backend teams to translate complex business logic into intuitive, error-free frontend interfaces.

### Frontend Engineer Freelancer (Contract)

Jan 2023 - March 2025

- Built high-performance landing pages and web applications for clients across various sectors, ensuring 100% responsiveness and pixel-perfect design.
- Engineered the consumption of complex REST API endpoints based on client specifications, ensuring seamless handling of user authentication and data retrieval.
- Partnered with cross-functional client teams to translate business requirements into functional code, ensuring projects were delivered on schedule.

---

## EDUCATION

Anchor University, Lagos Bachelor of Science  
(B.Sc.) in Computer Science

Sept 2022 – Present  
(Expected Aug 2026)

---

## FEATURED PROJECTS

### The Orbital

A real-time maritime tracking application that visualizes global ship movements and simulates emergency scenarios (like piracy) using WebSockets and Mapbox for live data rendering.

Link: [theorbital](#)

### EcoLocator

A location-based environmental tool that connects users to nearby recycling centers and provides a reporting system for illegal dumping, helping communities manage waste more effectively.

Link: [ecolocator](#)

### BMovie (B-Watch)

A responsive movie discovery platform built with React and Vite that fetches trending content via REST APIs, featuring a dynamic hero slider and detailed film information.
